

## ABSTRACT OF THE DISCLOSURE

An audio system and hat connection assembly incorporated into or adapted for  
5 connecting to a hat and comprising a first connection plate and corresponding second  
connection plate that connect through or to the bill or hat material wherein the first  
section is adapted for storing the audio circuit and speaker components and connects to  
the second section in a manner that grips the hat material and provides access to the audio  
controls. In an alternative embodiment, the connection assembly may comprise a clip  
10 that secures the audio system to the hat without penetrating it. The assembly includes  
storage space for securing at least one speaker and audio system, which may be adapted  
for storing other items, such as money and keys.
